ESL labels

Introduction

ESL (Electronic Shelf Label) system is an electronic display label used by retailers for displaying product prices and other information on shelves, being able to replace traditional paper labels. Each electronic shelf label can be connected to POS systems database wirelessly, and as a result, the labels content can be updated automatically whenever the information is changed under the control of a central server. With ESL system, retailers do not need to update the price labels manually, since POS information, ESL's content such as other retail systems will be synchronized, realizing also the consistency of inventory data and storage location management, as well as a better visibility of product freshness and expiration date.

OUR PRODUCT

ESL Functions

- ESL labels logs and management
- Online and offline NFC interaction
- Synchronize online and offline prices
- Inquiry merchandise / items and ESL label details
- Automatic promotional price change (Template Switch or Flash Alert)
